# What is Ctech?

---

Ctech stands for Coptic Technology. Ctech refers to all the technology that can be implemented in both our churches and in their ministry.

The objective of Ctech is the sharing of knowledge and experience between all of our churches. It is a forum for the communication and dissemination of information pertaining to technology, its use, and application in church ministry.

To that end, with the blessings of H.G. Bishop David, Ctech will host an Information Sharing Seminar in which church representatives can present information or ideas to the Coptic Tech Community.

## What will be discussed?

Due to the fact that the term Ctech is broad and encompasses a great deal of things to talk about, there is a proposal to hold this type of event, quarterly or biannually, to discuss the broad range of topics while remaining up-to-date.

This Seminar will focus on, but not be limited to, web ministry.

## Proposed Topics -

Some examples of topics to be discussed are:

- **Google Checkout for Non-Profits** — A free method of receiving electronic donations via a website utilizing credit card donations to be deposited directly in the church's bank account.

- **SMS (Text) Messaging** — A free method of messaging a group of people for the possible purposes

of a bible study class, a Sunday school class, or the congregation in general.

- **Google Apps for Non-Profits** — A way to setup free E-Mail, Calendar, Docs, and Sites for your church staff or members.

- **Easy to Create Websites** — Easily setup a website using a free open source content management system such as Joomla or Drupal.
